## Music

I

## Software

### [IDOM](#) - Python for the Web

Gives Python developers the power to create interactive web applications without writing a single line of Javascript. IDOM was originally inspired by [Jupyter Widgets](#), [Nteract's VDOM](#), and [React](#) however it breaks from both by allowing live updates to frontend views.

### [Spectate](#) - MVC for Python

A library for Python 2 and 3 that can track changes to mutable data types. With spectate complicated protocols for managing updates don't need to be the outward responsibility of a user and can instead be done "automagically" in the background. For instance, syncing the state between a server and client can be controlled by spectate so users don't have to.
